REMARKS

The presently claimed invention features probes that recognize certain variant sequences within the MTHFR gene and methods for using such probes.

On October 19, 2001 Applicants filed a Sequence Listing containing a nucleotide sequence of the MTHFR gene and several other genes, all of which were identified by name and GenBank® Accession Number in Table 10 of the present application. The Sequence Listing was used to amend the application to include the actual nucleotide sequences of the genes identified by name and GenBank® Accession Number in Table 10 of the application. The Sequence Listing was accompanied by a Declaration Regarding Incorporation by Reference. This declaration, signed by Vincent P. Stanton, Jr., stated that the sequences in the Sequence Listing were identical to those incorporated by reference in the application by inclusion of the GenBank® Accession Numbers in Table 10.

It has recently come to Applicants' attention that at least the sequence of the MTHFR gene in the October 19, 2001 Sequence Listing is not correct. Accordingly, Applicants have today submitted (sent to Box Sequence, U.S. Patent and Trademark Office, P.O. Box 2327, Arlington, VA, 22202; a paper copy is enclosed herewith) a replacement sequence listing containing the correct MTHFR nucleotide sequence.¹ Also enclosed is a Declaration Regarding Incorporation by Reference signed by Vincent P. Stanton, Jr. This declaration states that:

Applicant hereby declares that the Sequence Listing appended hereto consists of the same sequence information incorporated by reference in the above-referenced application by reference to the GenBank® Accession Number U09806.

The sequence of SEQ ID NO:1 in the appended Sequence Listing is the same as that associated with GenBank® Accession number U09806 on July 20, 1998, the filing date of U.S. Serial No. 60/093,484, from which the present application claims priority. This particular version of GenBank® Accession No. U09806 is assigned the version identifier GI:945022. Exhibit A attached hereto is a printout from the GenBank® Database of GenBank® Accession No. U09806 [GI: 945022]. This printout shows that GenBank® Accession No. U09806 [GI: 945022] replaced an earlier version of the sequence GenBank® Accession No. U09806 [GI:499223] on August 17, 1995. Exhibit B is a printout from the

¹ The sequences of the other genes identified in Table 10 are not included in the sequence listing because the pending claims concern only the MTHFR sequence.

GenBank® Database of GenBank® Accession No. U09806 [GI:6174884]
showing that it replaced GenBank® Database of Accession No. U09806
[GI:945022] on November 2, 1999.

In my Declaration regarding Incorporation By Reference filed on October 22, 2001 I mistakenly stated that the sequences in the Sequence Listing appended thereto were those incorporated by reference to GenBank® Accession numbers in the above-referenced application. However, for GenBank® Accession number U09806, the Sequence Listing appended to my October 22, 201 Declaration Regarding Incorporation by Reference had the incorrect version of GenBank® Accession number U09806, namely, GenBank® Accession number U09806 [GI:6174884] rather than GenBank® Accession number U09806 [GI:945022]. This error was made without deceptive intent.

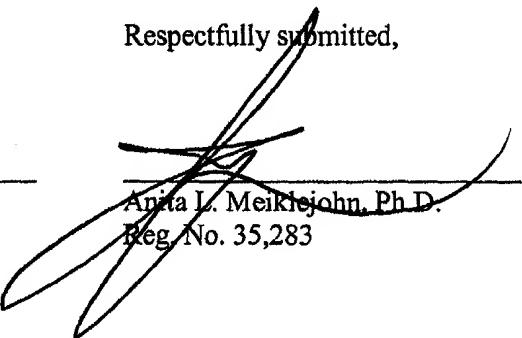

Applicants recognize that the previously pending claims have been allowed. However, Applicants request that the Examiner examine the pending claims based on the corrected MTHFR nucleotide sequence in the Sequence Listing submitted herewith.

Attached is a marked-up version of the changes being made by the current amendment.

Applicant asks that all claims be allowed. Enclosed is a \$370.00 check for the Request for Continued Examination fee. Please apply any other charges or credits to Deposit Account No. 06-1050.

Respectfully submitted,
